- > Forme d'enseignement : Cours magistral et Travaux dirigés
- > Ouvert aux étudiants en échange : Oui
- > Campus : Campus de Nanterre
- > Composante : Sciences économiques, gestion, mathématiques et informatique
- > Code ELP : 4E8BMFII

Présentation

The course provides students with a foundation in the modern theory of international finance. It studies the assets and institutions of international financial markets. A key difference between these markets and others is the role of exchange rates relating the value of two or more national currencies.

Objectifs

The students will acquire knowledge on a wide range of topics in international finance and open-economy macroeconomics, including: the foreign exchange market, exchange rate determination, Purchasing Power Parity, the Mundell-Fleming model of output and exchange rate determination under fixed and flexible exchange rates, speculative attacks and the causes and consequences of international financial crises. We will also discuss various recent policy debates: the role of global imbalances in the recent financial crisis, and several recent proposals to reform the international financial system.

Évaluation

Session 1 : Deux contrôles continus

Mode dérogatoire : Oral

Session 2 : Oral

Pré-requis nécessaires

Intermediate microeconomics and macroeconomics.

Much of the material is analytical in nature, and students should feel comfortable manipulating graphs and simple algebraic equations.

Compétences visées

Understand simple economic models, interpret charts depicting economic relationships, use simple analytical tools to draw arguments causes and effects
